

NEW ZEROFIRE LINE

This baby-changing unit from line ZEROFIRE has a bath and examination table where the little patients receive their first care.

Hygiene is assured by the surface made from Dupont™ Corian® instead of plastic. Body made from aluminium and stainless steel.

The unit has wheels and extendible tubes for hydraulic connection up to 2m. This allows for easy movement of the bed which up to now was made difficult as the unit was connected to the wall.

The bath is unique on the market thanks with an ergonomic shape designed specifically for bathing newborn babies.
